ABOUT ME

My professional experience stretches the gamut of brand, static, motion, and interactive design. Finding an appropriate solution or strategy to a problem is my favorite part of design. I enjoy integrating motion and sound with design interaction. I have a strong understanding of typography, color, and grids.

I feed off of group energy and collaborate well with others. I eagerly manage projects on my own. I communicate ideas well with clients and have strengthened many business relationships. I am punctual with project deadlines.

I have experience designing for many types of media, such as HD video, broadcast, websites, email campaigns, banner ads, mobile apps, brochures, posters, annual reports, white papers, trade show booths, logos, stationery, and much more.

I am fluent in many Adobe design applications, including InDesign, Photoshop, Illustrator, and After Effects. I am familiar with coding languages that are web centric and design oriented, such as HTML 5, Javascript, JQuery, and GreenSock. I have experience with Logic Pro. I also have some background with the Adobe DPS and PhoneGap. I am closely connected to the latest technologies and incorporate this understanding into my work strategy.
